

Library Management System

Overview

This project is a simple library management system implemented in Core Java, following the Model-View-Controller (MVC) architecture. The application allows users to manage books, and library.

Technologies Used

- Core Java
- MVC

Project Structure

```
|-- src
|  |-- controller
|  |  |-- Controller.java
|  |
|  |-- model
|  |  |-- Book.java
|  |  |-- Library.java
|  |
|  |-- view
|  |  |-- View.java
```

How to Run

- Clone the repository.
- Open the project in your favourite Java IDE.
- Compile and run the Main.java file.

Dependencies

- No external dependencies are required.

Acknowledgments

Feel free to customize this README file according to your project's specifics. Add details about the functionality, code structure, and any additional features you implement.
